

Installation guide for the Server-Side Storage

1. Install GoLang on the host machine.
2. Download the code bundle
3. Set up the firebase (register and make a project)
4. Set up admin access (In the main menu top-right, press cogwheel > Project Settings > Service Accounts > Generate New Private Key)
5. Put the key file into the same folder as the code script
6. Build and run the GoLang script

Note: if you want to host machine on other than localhost, make sure to change the host line in the main function of the code.
